

ESPA converter: software option for FieldCommander® devices

Highlights

ESPA (4.4.4) is a protocol for communication with pager systems.

This software option is a protocol converter, enabling the FieldCommander software to communicate with pager systems based on the ESPA 4.4.4 communication protocol.

Applications: Communication

- Extend your ESPA-device with the FieldCommander communications options, like email; FTP; SMS or remote control.

Visualization

- Using FieldCommander and this software option it is now easy to link your ESPA device and visualize the system on a webpage.

Integration

- Your ESPA device can now be integrated with other systems.

Monitoring, alerting and reporting

- Monitor XXX devices and extend them with alerting and reporting possibilities using the FieldCommander technology.

FieldCommander script

- script example included
- support for many dedicated FieldCommander functions included.

System requirements: Communication

- at least 1 free RS232 or RS485 communication port is required (depending on you pager controller)

FieldCommander software

- at least 1 free converter component in your FieldCommander sw is required (depending on application more free slots can be required).

Options must be ordered with a FieldCommander system.
Option software can be installed on 1 FieldCommander system.
Several options can be installed on 1 FieldCommander system.
For max. number of options please check your system spec.

ESPA 4.4.4 is a standard protocol adopted by the European Selective Paging Manufacturers Association.
